About

I am a Data Science undergraduate with a strong interest in Data Engineering and Data Analytics. I am passionate about working with data to uncover insights, solve real-world problems, and support data-driven decision-making. I have completed AI-related certifications through SLIIT and I am continuously expanding my technical knowledge in data technologies. I have completed beginner certifications in Power BI, Apache Kafka, Microsoft Azure, and Databricks to strengthen my skills in data analytics, cloud platforms, and modern data engineering practices. I am seeking internship opportunities where I can apply my knowledge, gain hands-on industry experience, contribute to meaningful projects, and grow as a collaborative and results-driven professional.

Technical Skill

- Programming Languages: Java | JavaScript | Python | C
- Databases: MySQL | MongoDB
- Data Science & AI: Pandas | NumPy | Scikit-learn | Data Analysis
- Tools & Platforms: Git | GitHub | PowerBI | Tableau | Azure | Vercel | Render | Databricks | kafka
- IoT & Networking: Arduino | Sensor Integration | Cisco Networking | Network Design
- Web Development: Spring Boot | React
- English, Sinhala, Tamil – *Professional proficiency or above*

Education

Sri Lanka Institute of Information Technology

B.Sc. (Hons.) in Information Technology Specialised in Data Science (Reading)

Current GPA 3.83 | Data Communication and Networks, Computational Mathematics & Statistics, Artificial Intelligence and Machine Learning ,Object Oriented Programming,

Data Structure and algorithm , Database Design and Development , Professional skills, Operating Systems , Web and Mobile Technology

Projects

- **Global Rice Yields Analysis & Prediction**

I built this as a personal project, analyzing rice yield data across 70+ countries from 1990–2013 with a focus on Sri Lanka, using Python and Scikit-learn. After cleaning and exploring the data with Pandas, I trained and compared two models to predict yield from rainfall, temperature, and pesticide usage -a Random Forest model significantly outperformed Linear Regression, achieving 94% accuracy ($R^2 = 0.94$) compared to just 18%. The analysis revealed that Sri Lanka's optimal growing conditions are around 1800mm rainfall and 27°C, with both drought and excessive rainfall hurting yield. .

Link: <https://github.com/vaishavi-v/rice-yield-prediction.git> (01-Day Build)

- **Sri Lanka Tourism Analysis Dashboard**

I built this as a personal project, analyzing 23 years of Sri Lanka's tourism trends using Python, SQL, and Power BI. After cleaning and analyzing arrival, revenue, and seasonal data with Pandas and SQLite, I found that revenue per tourist hit a record \$2,257 in 2021 despite an 83% COVID-driven drop in arrivals, and that India remained the top source market with 4.67M arrivals. I turned these insights into an interactive Power BI dashboard, then deployed a live Streamlit app so anyone can explore the findings without installing anything. .

Live app: <https://sri-lanka-tourism-analysis-rvhicedfiupvmvv5nvlqn8.streamlit.app/> (01-Day Build)

- **Student Concern Management System**

Developed the Student Concern & Evidence Manager module, my contribution to a group project building an AI-powered complaint management platform for a real client (Academy of Knowledge Bridge). Implemented full CRUD operations, input validation, evidence upload, and concern history tracking using Spring Boot and Java.

Link: <https://github.com/vaishavi-v/SCMS-University-Project.git> (02/2026) – (04/2026)

- **Student Concern Management System-Mobile-App**

Developed the mobile companion for the Student Concern Management System (React Native, Expo, Node.js/Express, MongoDB) as my contribution to the group project, implementing student-facing features including concern submission, real-time status tracking, and secure authentication. .

Link: <https://github.com/vaishavi-v/SCMS-Mobile-App.git> (02/2026) - (04/2026)

- **Medicine Ordering System**
Full-stack platform built with Spring Boot 3 and MS SQL Server, featuring 7-role RBAC, prescription verification, and inventory tracking. Designed the IT Administrator module for user and medicine catalog management.
Link: <https://github.com/vaishavi-v/Medicine-Ordering-System.git> (08/2025) - (10/2025)
- **Sri Lankan Household Electricity Consumption Forecasting**
Developed a LightGBM regression model to forecast Sri Lankan household net electricity consumption using smart meter data from the LIRNEasia Kaggle dataset. Built an end-to-end machine learning pipeline, identified and eliminated data leakage, performed feature engineering and hyperparameter tuning, and achieved $R^2 = 0.8448$ and MAE = 2231.32 kWh. Focused on model interpretability using electrical measurements and time-based features.
Link: <https://github.com/mahdyhassan-07/Sri-Lankan-Electricity-Consumption-Forecasting-ML-Model.git> (08/2025) – (10/2025)
- **Automated IOT Pet Feed System**
Designed and built an automated IoT pet feeding system for the IT1140 – Fundamentals of Computing module, using Arduino, ultrasonic sensors, and servo motors to detect food levels and dispense feed automatically. Took the initiative in scoping and delivering the hardware-software integration.(08/2024) – (10/2024)

Soft Skill

- **Communication:** Explains technical concepts clearly and concisely
- **Teamwork:** Collaborates effectively in group projects and community events
- **Adaptability:** Quick learner, eager to take on new technologies and challenges
- **Time Management:** Balances academics, extracurriculars, and personal development
- **Leadership:** Takes initiative to coordinate tasks and drive team projects to completion

Extracurricular activities

- Participated in MoraXtreme9.0, an algorithmic coding competition by IEEE Student Branch, University of Moratuwa, as a team lead (10/2024)
- Built Proxy Maze, a proxy monitoring API with health checks, threshold alerts, and Slack/Discord webhooks for Torch Labs' challenge (05/2026)
Link: <https://github.com/vaishavi-v/ProxyMaze-26.git>
- Participant, HackElite 3.0 (Inter-University Hackathon, IEEE WIE- University of Moratuwa)- ongoing

Certificates

- SLIIT - AI/ML Engineer – Stage 1 & 2
- University of Moratuwa - Python for Beginners
- Azure Fundamentals by Microsoft and Simplilearn SkillUp
- Get Started with Databricks for Data Engineering by Databricks and Simplilearn SkillUp
- Getting started with Kafka by Simplilearn SkillUp
- Power BI for Beginners by Microsoft and Simplilearn SkillUp
- MoraXtreme 9.0 – IEEE Student Branch University of Moratuwa
